I am a Systems student at the National University of Lanús and a Videogame Production student at the National Technological University of Argentina.

I am interested in gaining experience related to my careers, particularly in programming with different languages and gaining knowledge as I continue my education.

I would love to have the chance to show the skills I have acquired throughout my studies. In high school, I attended the Manuel Belgrano School of Fine Arts, where I gained experience in art and design.

I am passionate about Drawing, Pixel art, 3D Modeling and Animating. I work with tools such as Clip Studio Paint, Photoshop, Aseprite, Blender, and more.

In addition to programming and art, I greatly enjoy creating and developing video games. Currently, I work with Godot, Unity and Unreal Engine 5.

I am currently working and have five years of professional experience as a Backend Programmer in the Technology Department of the Municipality of Avellaneda "Néstor Kirchner."

Achievements

● Winner of the GameJam from itch.io "ba GameJam C40"
Theme: Sustainable
Game: "Rapido y Carpinchoso"

● Winner of the GameJam from itch.io "b3agz Jam 2024"
Theme: EVERYTHING HURTS
